1. Introduction

Atlas Standards (the Atlas Communities Standards platform) is a web application that Atlas Senior Living uses to run consistent quality inspections across its communities, track the resulting action items, and manage each new resident's move-in from first contact to a settled "Welcome Home." It replaces scattered spreadsheets and paper checklists with a single, role-aware system that captures Pass/Fail results in the field and gives every region clear, real-time visibility.

This manual covers every function of the app, organized by module. You can read it front to back or jump to the chapter you need using the Contents page. Buttons, labels and menu items are written exactly as they appear in the app (the interface is in English).

What you can do with Atlas Standards

- **Run inspections** in the field on any device — pick a community and a survey type, then mark each standard Pass or Fail with optional comments and photos.
- **See performance at a glance** — average scores, communities that need attention, weakest standards, and performance by region.
- **Manage the standards themselves** — create and edit questions, group them into survey types, and choose which communities each one applies to.
- **Track action items** — every failed standard becomes a follow-up item the team can work through.
- **Run resident move-ins** — a phased checklist with required compliance items, attachments, printable binder pages, automatic email reminders, and a completion summary.
- **Plan with the calendar** — inspections, move-in dates and follow-ups in one monthly view.
- **Share resources** and configure who is notified about results.

How the platform is hosted Atlas Standards runs in the cloud and is reached from a web browser at your organization's address (for example, **standards.atlasseniorliving.net**). There is nothing to install — it works on a laptop, tablet or phone.

2. Roles & who can do what

Every person signs in with their own account. What you see and can do depends on your **role**. There are three roles, plus the special Administrator account.

Role	Who it is	Can do
Administrator	Head-office / quality leadership	Everything: all communities and regions, manage standards and survey types, create users, reset passwords, configure email routing, and see all reports.
Regional	A region's leaders (e.g. SRDO, RDW, RSMD)	Run inspections and move-ins for the communities in their region, and view dashboards, reports and action items scoped to their region.
Staff	Community-level users	Run inspections and move-ins for their own community and review their own results.

Regional accounts are created automatically from a region's leadership list — add a leader in **Regions** and their login is created for them (see the Regions chapter). The Administrator manages everything from **Settings**.

Not sure what your role can see? If a menu item or button described in this manual isn't visible to you, it's almost always because your role doesn't include that function. Ask your administrator if you believe you should have access.

3. Signing in, passwords & account recovery

Signing in

Open the app's web address in your browser. On the sign-in screen, enter your **Username** and **Password** and select **Sign In**. Usernames follow a simple pattern: administrators and community users have a short name (for example admin or user7), and regional leaders use `firstname.lastname` (for example keith.martin).

Forgot your password?

If you can't sign in, select **Forgot your password?** on the login screen, type your username, and choose **Request reset**. For your security the app always shows the same confirmation message (it never reveals whether an account exists). Behind the scenes, your administrator is notified so they can reset your password and share a temporary one with you.

Set a new password on first sign-in

After an administrator resets your password, sign in with the temporary password they give you. You will be taken straight to a **Set a new password** screen and asked to choose your own password before you can use the rest of the app. Enter a new password (at least 6 characters), confirm it, and select **Save new password**.

Changing your password any time

You can change your password whenever you like from **Settings** → **Change password**: enter your current password, then your new one.

Administrators To reset someone else's password, go to **Settings** → **Reset a user's password**, enter their username, and select **Reset to temporary password**. A one-time temporary password is shown — copy it and share it with the user. They'll be required to set their own the next time they sign in. This works for every account type.

4. The Dashboard

The Dashboard is your home screen and at-a-glance overview. Administrators and regional leaders land here after signing in. It is made up of a row of summary tiles (KPIs) and four information cards, plus — on wide screens — a calendar rail on the right.

Summary tiles (KPIs)

- **Average score** — the average inspection score across the communities you can see.
- **Visited this month** — how many of your communities have been inspected this calendar month (e.g. 12/39).
- **Open action items** — the total number of failed standards still to be addressed.
- **Inspections this month** — how many inspections have been submitted this month.

The four cards

- **Needs attention** — the communities with the lowest recent scores and open actions. Select a row to open that community's detail panel.
- **Performance by region** — a bar for each region with its average score. Select a region's name to drill into that region's community performance.
- **Weakest standards** — the standards that fail most often across all visits, so you know where to focus coaching.
- **Recent activity** — the latest inspections, each showing the inspector, community, date and score. A small NEW badge marks items you haven't seen yet.

The calendar rail (wide screens)

On large desktop screens a right-hand rail shows a **This month** mini-calendar and an **Upcoming** list of move-in follow-ups. On narrower screens these appear as stacked cards instead, so nothing is lost.

Rearranging your dashboard

On desktop you can lay out the dashboard the way you like. Hover a card (or KPI tile) and grab the  **handle** that appears next to its title, then drag it into a new position. Your layout is remembered on that device. Select **Reset layout** (top-right of the grid) to put everything back to the default order. On phones

and tablets the layout stays fixed.

Light or dark mode Use the moon / sun button in the top bar to switch between light and dark appearance at any time. Your choice is remembered on that device, and the app also respects your system preference the first time you visit.

The **Help** button in the top bar replays a short guided tour of whichever screen you're on. See the Help & guided tours chapter.

5. Communities

The Communities view shows a card for every community you can access. Each card carries a cover photo, the community's latest score shown as a ring, how many open action items it has, and a **View Details** button.

Reading a community card

- The **score ring** is the community's most recent inspection score. Green is strong, amber is middling, red needs attention; N/A means it hasn't been inspected yet.
- The **region badge** in the corner shows which region the community belongs to.
- **Open Actions** shows how many failed standards are outstanding.

Community detail

Select **View Details** (or a community name elsewhere in the app) to slide open the detail panel. It shows the overall score, open action items, the last visit and inspector, and a breakdown of results so you can see exactly what passed and failed.

Cover photos (administrators)

Administrators can give each community a cover photo. Hover the card image and use the **camera** button to upload a photo; the **trash** button removes it. Cover photos are purely visual and help staff recognize communities quickly.

Sorting

Use the sort control to order communities — for example by score (best or worst first) or by name — to quickly find the ones that need attention.

6. Regions & Leadership

Regions group communities together and hold each region's leadership. Every region has its own emblem and a card summarizing its average score and open action items.

Leaders are logins

The people listed under a region's **Leadership** are its leaders — and each one automatically gets a regional login. Adding a leader here creates their account (username from their name, e.g. keith.martin); removing them removes access. Select a leader's name to open their activity profile and ranking.

Managing leaders (administrators)

- **Add leader** — select the dashed **Add leader** button, enter the person's name and role (e.g. SRDO, RDW, RSMD). Their regional login is created automatically.
- **Edit / remove** — use the pencil and trash buttons on a leader's row. You can also set a leader's photo with the small camera button on their avatar.
- **Move a leader between regions** — drag a leader's row and drop it onto another region; their account moves with them.

Renaming a region and reassigning communities

- **Rename a region** — administrators can select the pencil next to the region's name in its header. The region's identity (and everyone's access) is preserved.
- **Reassign a community** — in a region's community list, use the region dropdown next to a community to move it to another region. When a community is renamed, its inspections, action items, move-ins and cover photo all follow automatically.

Region performance

Select a region's name (here or from **Performance by region** on the Dashboard) to open a dedicated view of how that region's communities are performing, so leaders can compare their communities side by side.

7. Standards & Survey Types

"Standards" are the individual questions that inspectors answer during a visit — things like "Licenses/Certifications are posted and up to date." They are managed in the **Question Manager**, reached from the **Standards** menu item (administrators).

The Question Manager

The Question Manager lists every standard with its text, whether a photo is required, which survey types it belongs to, which communities it applies to, and its created date. You can filter the list by survey type.

Creating and editing standards

- **Create New Question** — write the standard's text, choose whether a photo is required to answer it, assign it to one or more **survey types**, and choose which communities it applies to (all, or a specific set).

- **Edit** — use the pencil on any row to change its text, photo requirement, survey types or community assignment.
- **Delete** — use the trash icon, or tick several rows and use **Delete Selected** to remove them in bulk.

Survey types

A **survey type** is a named group of standards for a particular kind of visit. Select **Survey Types** to create, rename or remove them. The platform ships with six:

Survey type	Focus
Full Regional Review	Comprehensive review covering all aspects
Operational Review	Operational procedures and efficiency
Sales & Marketing	Sales processes and marketing materials
Clinical Review	Medical and clinical standards
Dining Review	Food service and dining areas
Life Safety Review	Safety equipment and emergency procedures

Printable standards

Select **Standards PDF** to download a clean, printable one-pager of all active standards — useful for training or for a paper reference on site.

8. Running an inspection

An inspection (a “visit”) is how results get into the system. Staff and regional users run inspections; administrators can too.

Starting a visit

- Select **Start a visit** (or the + action). Choose the **community** you’re inspecting and the **survey type** for this visit.
- The app loads the standards that apply to that community and survey type, grouped for you to work through item by item.

Answering each standard

- For each item, mark it **Pass** or **Fail** with the toggle.
- Tap the **info icon** on an item to see exactly what’s required to pass.
- Add a **comment** in the box, and — if it should be acted on by a specific team — direct it to **Clinical** or **Operations (Ops)** so the right people are notified.

- If a standard requires a **photo**, attach one as evidence.

How scores are calculated

Each item is worth 100 points for a Pass and 0 for a Fail. The community's score for the visit is simply the percentage of items marked Pass. So a visit with 36 of 42 items passing scores 86%.

Submitting

When you've answered every item, submit the inspection. The results immediately update the dashboards and reports, every failed item becomes an action item, and any comments you directed to Clinical or Ops are routed to those teams.

The info icon is your friend On every item, the info icon spells out the pass criteria so two inspectors judge the same standard the same way. Use it whenever you're unsure.

9. Reports & Analytics

The Reports view turns every submitted inspection into performance insight. It opens with three headline tiles — **Total Inspections**, **Pass**, and **Fail** — followed by several breakdowns.

What's on the Reports page

- **Survey Type Breakdown** — how many inspections of each survey type have been done, with a share of the total.
- **Top Performing Communities** — a ranked table of communities by score, with their open action items.
- **Top Performers** — a ranked table of team members by number of visits, with medals for the top ranks.
- **Leaderboard** — two side-by-side boards: **Most inspections** and **Best pass rate**. Select any name to open that person's profile and their global ranking.

Exporting

Use the export buttons to download the report data for further analysis or sharing:

- **CSV** — raw data for spreadsheets.
- **Excel** — a styled workbook.
- **PDF** — a formatted report, including a summary section.

10. Action Items

Every standard marked **Fail** during an inspection becomes an **Action Item** — a piece of follow-up work. The Action Items view gathers them into cards so nothing slips through the cracks.

Reading an action item

- Each card shows the **standard that failed**, a **HIGH PRIORITY** flag, the inspector and community, and the date.
- Cards without a photo show a themed icon so the list stays easy to scan.

Work through the list and re-inspect to clear items — when a later inspection passes that standard, it stops counting against the community's open actions.

11. Move-Ins

The Move-Ins module manages each new resident's arrival as a phased checklist — from preparation through to a settled "Welcome Home" and follow-ups. Any signed-in user can open it; what you see is scoped to your communities.

The move-in board

Each card is one resident's move-in, showing their name, community, a progress bar, a countdown to move-in day, and how many required items are still pending. Cards turn **urgent** (red) when the date is close and required items remain. Search by resident name or filter by status and community.

Starting a move-in

Select **New move-in**, enter the resident's name, their community, and the target move-in date. The full checklist loads automatically.

The checklist (phases & departments)

The checklist is organized into phases, and each item is tagged with the department responsible (Business Office, Nursing, Dietary, Housekeeping, Maintenance, Lifestyles, Executive). You can filter a move-in by department to see just your team's tasks. The default phases are:

Phase	What it covers
Pre Move-In (Red Carpet · Prep)	Getting everything ready before arrival, incl. required compliance items.
Move-In Day (Tour-In)	Everything for the day the resident arrives.
Welcome Home	Settling the resident in.
Follow-Up (Day 5 / 1–2 Weeks)	Checking in after the move to make sure all is well.

Working a move-in

- **Check items off** as they're done — the change saves instantly and the progress bar updates.

- **Required items** are marked and enforced: a move-in can't be marked complete while any required item is still pending (a compliance gate).
- **Attachments** — attach signed forms or documents to an item.
- **Notes & activity** — add notes and see a running activity log of who did what and when.

Completing a move-in

When all required items are done you can mark the move-in **complete**. A completion summary email is sent to the region's leaders and administrators. You can also **reopen** a completed move-in if needed.

Printable binder pages

Select the print / PDF option to produce a clean checklist for the physical binder — available filled (showing progress) or blank. Each PDF carries the Atlas logo and ends with a **Sign-off** block: signature lines for **Staff** and **Resident / Family**, with printed name and date.

Editing the master checklist (administrators)

Administrators can edit the master checklist from the template editor — add or remove phases and items, assign each item to a department, and mark items as **Required** so a move-in can't be completed until they're done.

Automatic reminders

The team receives automatic email reminders as a move-in date approaches, plus the completion summary when it's finished, so move-ins don't get forgotten.

Exporting

Export all move-ins to **Excel** or **CSV** from the toolbar for reporting.

12. Calendar

The Calendar is a single monthly view of everything scheduled. Move between months with the arrows, or jump to **Today**.

Three kinds of events

- **Inspections** (blue) — visits that have been recorded.
- **Move-in dates** (amber) — target arrival dates for residents.
- **Follow-ups** (teal) — move-in follow-up reminders on Day 5 and at 1–2 weeks.

Filtering and details

Use the **All regions** and **All communities** filters to focus the calendar. Select any day with events to see the full detail below the grid — each entry links straight to its inspection or move-in.

A compact version of this month's calendar also appears on the Dashboard (in the right rail on wide screens, or as a card otherwise), with the next follow-ups listed under **Upcoming**.

13. Resources

The Resources library is a shared place for documentation and guides — phone lists, policies, forms, and anything else the team needs on hand.

- **Download** — select a resource card's **Download** button to get the file.
- **Add Resource** (administrators) — upload a file with a title and description. Supported types include PDF, Word, Excel, PowerPoint, images and more.
- **Remove** (administrators) — use the trash button on a resource card.

14. Settings

Settings is where you manage your own profile and — for administrators — users and email routing.

Your profile (everyone)

- **Display name & photo** — update how your name appears and add a profile photo (also used as your avatar around the app).
- **Change password** — set a new password (current password required).
- **Recent activity** — a log of your recent actions.

User management (administrators)

- **Create user** — enter a full name, an optional email (which sends them their login), a role (Staff, Administrator or Regional) and the community or region as appropriate. A username and temporary password are generated and shown once — copy them.
- **Reset a user's password** — enter a username and get a one-time temporary password to share; the user must set their own on next sign-in.
- **Manage existing users** — review the user list and remove accounts you no longer need.

Email routing (administrators)

Choose who is notified about results and events:

- **Inspection report subscribers** — who receives inspection reports (region leaders automatically get their own region).
- **Clinical** and **Ops** — the addresses that receive comments inspectors direct to those teams.
- **Administrator notifications** — who is alerted to events such as new users and password-reset requests.

About emails Email delivery depends on the mail service being configured for your installation. Even if an email doesn't go out, the in-app workflows still work — for example, an administrator can always see a reset request and share the temporary password directly.

15. Appearance: light & dark mode

Atlas Standards supports both a light and a dark appearance across the whole app — dashboard, communities, regions, standards, reports, move-ins, calendar, settings, the login and the inspection form.

- Toggle with the **moon / sun** button in the top bar (a floating button on the login screen).
- Your choice is saved on that device.
- The first time you visit, the app follows your device's system setting (light or dark).

16. Help & guided tours

Every major screen has a short, interactive walkthrough. Select **Help** in the top bar to replay the tour for the screen you're on — the Dashboard, Regions, Standards, Survey Types, Move-Ins and Calendar each have their own. New users see the relevant tour automatically the first time they open a screen. Tours point at real buttons and explain what each one does, so they're the fastest way to learn a new area.

Appendix A — Roles & permissions at a glance

Function	Admin	Regional	Staff
Run inspections	Yes	Yes (own region)	Yes (own community)
View dashboard & reports	All	Own region	Own results
Manage standards & survey types	Yes	No	No
Manage regions & leaders	Yes	No	No
Run & edit move-ins	All	Own communities	Own community
Edit move-in master checklist	Yes	No	No
Add / remove resources	Yes	No	No
Create users & reset passwords	Yes	No	No
Configure email routing	Yes	No	No

Appendix B — Scoring & ratings

- Each standard is answered **Pass** or **Fail**.
- Pass = 100 points, Fail = 0 points.
- A visit's **score** is the percentage of items passed.
- Score colors: **green** $\geq 75\%$, **amber** 50–74%, **red** $< 50\%$; **N/A** means not yet inspected.
- Every **Fail** becomes an **action item** until a later visit passes that standard.

Appendix C — Glossary

Term	Meaning
Standard / Question	A single item an inspector answers Pass or Fail.
Survey type	A named group of standards for a kind of visit (e.g. Dining Review).
Visit / Inspection	One completed round of answering a survey type's standards for a community.
Action item	A standard that failed and still needs to be addressed.
Move-in	A new resident's onboarding, tracked as a phased checklist.
Required item	A move-in checklist item that must be done before the move-in can be completed.
Region	A group of communities with its own leadership.
Regional account	A login created automatically for a region's leader.

Appendix D — Quick help

I want to...	Where to go
Reset my forgotten password	Login screen → Forgot your password? (admin then shares a temp password)
Change my password	Settings → Change password
Start an inspection	Start a visit → pick community & survey type
See what failed most often	Dashboard → Weakest standards
Add a new standard	Standards (Question Manager) → Create New Question
Print a move-in binder page	Open a move-in → print / PDF option
Add a new user	Settings → Create user (admin)
Switch light / dark mode	Moon / sun button in the top bar
Replay a screen's tutorial	Help button in the top bar

Atlas Standards Operations Manual · Version 1.0 · July 2026 · Atlas Senior Living — Web Technologies. Screens and features may evolve; when in doubt, the Help button in each screen shows the current walkthrough.
